

## Configuration Instructions

The configuration process begins with an order of specific selections based on your unique application. Please be aware that component choices are dependent on previous selections and component compatibility and that not all products will follow the same routine of component selection. The instructions below are designed to guide you through a complete selection for informative purposes.

### Screen layout and selection options

Reset – The reset  button at the top left hand corner of the screen if chosen will deselect all previous selections and reset to the starting position

My selections – Each time an option is selected the result will be displayed under my selections.

Change/Redo – The redo  button will deselect that specific option and navigate to the previous selection. Each selection will contain a redo next to My Selections to allow you to change a specific selection in that category.

Please Select – The please select in the header will change based on the next selection process. Example: Please select mount type, and then please select application type.

Results – In the far right side of the header bar the count will change and list by number the amount of choices available for that specific selection. The result header is also used to display the final configuration product number.

Select – The select  button resides next to each component selection and when chosen records the specific component in My Selections. You also have the ability to click on the picture to select the option.

Narrow Results – Due to the expansive list of options in some categories a Narrow Results feature allows the ability to filter components. Simply choose a specific feature below one of the Narrow Results categories and the available components will be displayed based on that selection. To revert back to the previous list of available components select the redo  button.

Final Configuration – When complete with the selection process a list will appear below My Selections of each component contained in the configured product.

### Instructions for configuring a 445-CP catalog item

1. Select  the mount type or the image. Options displayed are wall mounted or deck mounted.
